10 Ways to Slow the Spread of Snake Venom (First Aid)

1. Stay calm and keep the bitten person still.
2. Immobilize the bitten limb with a splint if possible.
3. Keep the bite below heart level if practical.
4. Remove rings, watches, or tight clothing before swelling starts. 5. Do not run or walk unless absolutely necessary.
6. Call emergency medical services and get to a hospital immediately.
7. Do not cut the wound or try to suck out the venom.
8. Do not apply ice, chemicals, or electric shock to the bite.
9. Do not use a tight tourniquet unless specifically trained and instructed.
10. Monitor breathing and consciousness while waiting for medical care.
